FIRE WEATHER

Fire weather in 1980 was extremely variable. Near record precipitation occurred in parts of the United States. Serious drought conditions from lack of rain or snow pack, developed in other areas; specifically the north and south central region and southern California. Parts of Kentucky, Missouri, and Arkansas had high temperatures, low humidities, and low rainfall throughout the spring and summer. In the fall, effects of a dry summer in southern California began to combine with extreme Santa Anna wind conditions to produce severe fire weather conditions. Early winter rains in both of these areas ended the 1980 fire season around the first of December.
